

System Blueprint (*a.k.a.* “Design Doc”)

TNPG: BATMood

project: BATMood Games

Target ship date: 2026-06-08

roster:

Name	Email	Primary Role	Secondary Role
Thamidur Rahman	thamidurr@nycstudents.net	PM	Frontend Devo
Alvin Sze	alvins44@nycstudents.net	Database Devo	Backend Devo
Bogdan Sotnikov	bogdans2789@nycstudents.net	Backend Devo	Frontend Devo
Matthew Ciu	matthewc691@nycstudents.net	Frontend Devo	Database Devo

Summary

Inspired by Jackbox Games Party Packs, our site allows users to play party games together.

Problem Being Solved

Lack of entertainment and bad vibes.

Target Users

Who will use this system?

- Friends that want to have a quick, free way to play short party games.
- People who want to store game stats.

Why This Project Matters

It will be fun!

Minimum Viable Product (MVP) Scope

Core Features (Required for Final Submission)

Features that **must** be completed

1. User accounts to track wins and losses.
2. Lobbies that authorize player to join if they are part of the game.
3. One game.

Stretch Features (Only if MVP is Complete)

1. Up to four games.
2. Player profile customization.
3. Game joining without an account

Explicit Non-Goals

Features intentionally excluded: - Bugs.

Technology Stack

Layer	Selected Tool
Backend Framework	Flask
Frontend Framework	Bootstrap
Database	SQLite
Authentication	Flask sessions

Why This Stack Was Chosen

Our team prefers the ease of use and aesthetic possibilities of Bootstrap and we have experience with it on multiple projects. SQLite seems relatively cleaner to use with Flask and we have all used it extensively.

Team Ownership Plan

Each member must own meaningful deliverables.

Team Member	Primary Ownership	Secondary Ownership	Specific Deliverables
Thamidur Rahman	Flask App	Game Script	Plan for unique game and how it will be implemented. Database to store player info and authenticate. System to house multiple links for different lobbies.
Alvin Sze	Database	Game Script	
Bogdan Sotnikov	Flask App	JS	
Matthew Ciu	CSS	HTML	

Component map

Site map

Key User Stories

At a party I want a site that allows me to quickly host a game that anyone with internet connection can join easily.

As a player I want to compete with others, see how others perform, and see how they've performed in the past.

Database Design

player	String	PK
password	String	
wins	int	
losses	int	

serverID	String	PK
password	String	
gameID	int	
player1	String	
player2	String	
player3	String	
player4	String	
player5	String	

serverID	String	PK
player6	String	

Testing Plan

We will be sure to test that only authorized users can enter in specific links.

Timeline

Week 1 Goals: Smooth database updates within a game.

Week 2 Goals: Player authorization and splitting of games to different domains.

Week 3 Goals: Creating rules and displaying games.

Internal Deadlines: Front end for each part.

Completion Criteria (*a.k.a.* “Definition of ‘Done’ ”)

Project is considered complete when all of the following are true: 1. Players can authorize joining into a lobby. 2. Games can continue and end with player input without issues. 3. Wins and losses are tracked onto player profiles which can be displayed.

Open Questions

We are unsure if all games will be of our own design.

Appendix

Current inspirations: Jackbox, Imposter, Tapple,

Other

We love this assignment!
